می خواهیم نشان دهیم که ماتریس  $A_k$  بهترین تخمین برای A در فرم فروبینیوس می باشد. نشان می دهیم که برای هر ماتریس B با رنگ حداکثر k رابطه زیر برقرار است

$$\left| |A - A_k| \right|_F \le \left| |A - B| \right|_B$$

اثبات برگرفته از این لینک

**Theorem 4.7** For any matrix B of rank at most k

$$||A - A_k||_F \le ||A - B||_F$$

**Proof:** Let B minimize  $||A - B||_F^2$  among all rank k or less matrices. Let V be the space spanned by the rows of B. The dimension of V is at most k. Since B minimizes  $||A - B||_F^2$ , it must be that each row of B is the projection of the corresponding row of A onto V, otherwise replacing the row of B with the projection of the corresponding row of A onto V does not change V and hence the rank of B but would reduce  $||A - B||_F^2$ . Since each row of B is the projection of the corresponding row of A, it follows that  $||A - B||_F^2$  is the sum of squared distances of rows of A to V. Since  $A_k$  minimizes the sum of squared distance of rows of A to any k-dimensional subspace, it follows that  $||A - A_k||_F \le ||A - B||_F$ .
